

# Release 7.3 Upgrade Notes

## Need to know

### New "Administer Security Hotspots" Permission

During the upgrade, the new "Administer Security Hotspots" permission is granted to all users/groups who already have the "Administer Issues" permission.

### Expanded Compute Engine Logs

Starting with this version, Compute Engine logs will be more verbose. These logs are rotated automatically, but on a daily basis, not based on file size.

### PostgreSQL < 9.3 No Longer Supported

SonarQube 7.3+ only supports PostgreSQL 9.3 to 10. SonarQube will not start if you are using a lower version of PostgreSQL.

### Some 3rd-party Plugins Incompatible

APIs deprecated before SonarQube 5.6 are dropped in this version, making some third-party plugins incompatible. It is always advised to check plugin compatibility in the [Plugin Version Matrix](#) with each new upgrade, and more so for this version.

## Next steps

Follow the detailed [Upgrade Guide](#) to complete your upgrade.
