

Release 5.6 Upgrade Notes

SonarQube 5.6 requires Java 8

Java 8 is required to run SonarQube Server and SonarQube Scanners. See

[SONAR-7587](#) - Both Server and Scanner must fail if not started on Java 8+

CLOSED

Usage of external authentication and authorization system

If you are using an external authentication and authorization system (LDAP, Active Directory, Crowd, ...) for which you had to configure a realm in the "conf/sonar.properties" file, please make sure that you follow the "Upgrading" guide carefully. **don't forget to copy the related SonarQube plugin and its related configuration in "conf/sonar.properties" (including "sonar.security.realm" and "sonar.security.localUsers" if present)** into the new SonarQube instance otherwise you will be locked out after migration.
