

# fb-contrib Plugin

## ⚠️ Deprecated

This plugin is deprecated since [SonarJava](#) version 2.4 and [FindBugs Plugin](#) version 2.4, which it was combined with. Use FindBugs Plugin version 2.4+ instead.

## Description / Features

The fb-contrib plugin contains additional rules from the [fb-contrib project](#). Because fb-contrib is an outgrowth of FindBugs, you will find the fb-contrib rules in the Findbugs repository.

The screenshot shows the SonarQube configuration page for the 'fb-contrib' plugin. The 'Coding rules' tab is selected. The 'Name/Key' field contains 'fb-contrib'. The 'Plugin' dropdown menu is open, showing a list of options: Any, Checkstyle, Findbugs (highlighted), PMD, SQALE, and Sonar. The 'Severity' dropdown shows: Any, Blocker, Critical, Major, Minor, and Info. The 'Status' dropdown shows: Any, Active, and Inactive. The 'Inheritance' dropdown shows: Any, Not inherited, Inherited, and Overrides. A red arrow points from the 'fb-contrib' text in the 'Name/Key' field to the 'Findbugs' option in the 'Plugin' dropdown.

## Requirements

Plugin	1.0	1.1	1.2
fb-contrib	4.6.0	4.6.1	4.8.5

## Installation

1. Install the plugin through the [Marketplace](#) or download it into the `SONARQUBE_HOME/extensions/plugins` directory
2. Restart the SonarQube server
