

Release 5.3 Upgrade Notes

Noteworthy

MS SQL Collation

Collation of all columns with a type VARCHAR are changed to *Latin1_General_CS_AS*. The default collation associated to the database won't be used anymore as the collation of VARCHAR columns is now forced each time such column is added.

Cross-project duplication is back

Cross-project duplication was missing in SonarQube 5.2, it's now back in SonarQube 5.3.

However, please note that it slightly differs from how it was working before:

- Before 5.2: activating this feature was in fact allowing to detect duplications between modules, may those modules be in different projects or in the same project.
- In 5.3: this feature is implemented as it should have always behaved, i.e. it allows to detect duplications between projects only (but not between modules inside a single project - which will be implemented in SonarQube 5.4)

 [SONAR-2867](#) - Standard copy-paste detection should happen within a project, not only within a module CLOSED)

Plugins Compatibility

The Developer Cockpit and Report Plugin are compatible with SonarQube 5.3.
